

Assignment – Fasteners

In this course we will be specifying threaded holes on a detail drawing. Since you did not cover that material in EM104, you will need to read about the correct method. This is covered in the section on Threaded Fasteners (Section 10.3 of Fundamentals of Graphical Communication 4th ed., or Chapter 17 of Technical Graphics Communication 3rd ed.)

You will have a group quiz on the topic during our next meeting. You will be asked to

- write the drawing note for a threaded hole (for example, we could ask you to specify a hole that fits a 10-24 screw or an M5 screw)
- match the word with the definition for important thread terminology (e.g. Major diameter, Pitch, Lead, Threads per Inch, ...)
