

ROSE-HULMAN ASTRONOMY CLUB

09/17/09 MEETING MINUTES

Astronomy Fact of the Week: Magnification of most telescopes is determined by dividing the focal length of the telescope by the focal length of the eyepiece.

Tomorrow (09/20/09) we will be having our first open house of the year, weather permitting. We could really use some help from members, so if you would like to help out, please come out at 8:45 to help set up telescopes. Gina and I will be there a bit earlier to get started.

Thanks to everyone who came last night! I hope you all enjoyed our Constellation Night! If you would like more information about the myths that we discussed, or information on a constellation we didn't talk about, you can find it here: <http://www.astro.wisc.edu/~dolan/constellations/>
