

Rose-Hulman Institute of Technology Astronomy Club

12/03/09 MEETING MINUTES

Astronomy Fact of the Week: In a system in which there are 2 large masses and one small mass, there are 5 points in the small mass' orbit around the larger masses at which the smaller mass remains stationary relative to the larger masses. These are known as Lagrange points.

We have begun planning our Winter **Party, which will be held the 2nd week after break on Thursday, January 14th, 2010 from 7-8:30.** It will be open-house style, and we'll have hot chocolate, cookies and prizes! Would anyone like to write a quiz to determine who wins the prizes or to create an email to advertise?
