ECE 300

## Signals and Systems

## Homework 9

Due Date: Friday 12 February at 2:30 PM Note: Exam 3 Tuesday May 16
Reading: K \& H, pp. 221-231
Note: Use the Fourier transform table given out in class. Also, you do not need to plot the figures in the problems where the text problem says to plot the figure.

## Problems

1. Find the fraction of the total signal energy (as a percentage) contained between 100 and 300 Hz in the signal $x(t)$ given below:

$$
x(t)=5 \operatorname{sinc}\left(\frac{t}{0.002}\right)+5 \operatorname{sinc}\left(\frac{t}{0.001}\right)
$$

2. K \& H, Problem 4.19 (a,b,c only)
3. K \& H, Problem 4.23 (a only)
4. K \& H, Problem 5.14
5. K \& H, Problem 5.16 (a and b only)
6. K \& H, Problem 5.19 (For part c you should get $y(t)=6 x(t)-2$ )
7. A Butterworth filter has the property that it is maximally flat in the passband. An nth order Butterworth filter has the magnitude squared response

$$
|H(\omega)|^{2}=\frac{1}{1+\left(\frac{\omega}{\omega_{p}}\right)^{2 n}}
$$

where $\omega_{p}$ is the passband frequency. At this frequency the power has been reduced by one half or 3 dB ,

$$
\left|H\left(\omega_{p}\right)\right|^{2}=\frac{1}{1+\left(\frac{\omega_{p}}{\omega_{p}}\right)^{2 n}}=\frac{1}{2} \quad \text { or } 10 \log _{10}\left|H\left(\omega_{p}\right)\right|^{2}=10 \log _{10}\left(\frac{1}{2}\right)=-3 d B
$$

To determine the required order of a filter we often look at the desired stopband frequency, $\omega_{s}$. Usually we want to indicate the minimum required power difference between the passband and the stopband, $\Delta$. $\Delta$ is the rejection. Hence we have

$$
\Delta=20 \log _{10}|H(0)|-20 \log _{10}\left|H\left(\omega_{p}\right)\right|
$$

or

$$
\Delta=-10 \log _{10} \frac{1}{1+\left(\frac{\omega_{s}}{\omega_{p}}\right)^{2 n}}
$$

The ratio $\frac{\omega_{s}}{\omega_{p}}$ is called the transition ratio.
a) Show that we can write

$$
n=\frac{\ln \left(10^{\frac{\Delta}{10}}-1\right)}{2 \ln \left(\frac{\omega_{s}}{\omega_{p}}\right)}
$$

Note that $n$ must be an integer, so we always round up (to the next larger integer).
b) For $\omega_{p}=10 \mathrm{rad} / \mathrm{sec}, \omega_{\mathrm{s}}=20 \mathrm{rad} / \mathrm{sec}$, and $\Delta=18 \mathrm{~dB}$, determine the required Butterworth filter order for this filter. (Remember it must be an integer). Using the Table at the end of this problem, plot the Bode plot of your Butterworth filter and verify that all frequencies $\omega>\omega_{s}$ have magnitude (power) less than $\Delta_{\text {max }}$. Matlab's tf command and Bode commands will be really useful here. Note that you can click on the curve on the Bode plot to read it more accurately. Turn in your plot.
c) Matlab's command $\mathbf{r}=$ pole( $\mathbf{H}$ ), where H is the transfer function of the Butterworth filter, returns the poles of the transfer function in the array $\mathbf{r}$. Using Matlab's commands abs and angle, relate the magnitude of the poles to $\omega_{p}$, then plot the pole locations in the complex plane on a circle with radius $\omega_{p}$. (Note that angle returns angles in radians, and you probably want angle in degrees. You might also look at the function pzplot.) Note that the pole locations are all separated by an angle $\theta$. What is this angle?
d) For $\omega_{p}=15 \mathrm{rad} / \mathrm{sec}, \omega_{s}=35 \mathrm{rad} / \mathrm{sec}$, and $\Delta=28 \mathrm{~dB}$, determine the required Butterworth filter order for this filter. (Remember it must be an
integer). Using the Table at the end of this problem, plot the Bode plot of your Butterworth filter and verify that all frequencies $\omega>\omega_{s}$ have magnitude (power) less than $\Delta_{\text {max }}$. Matlab's tf command and Bode commands will be really useful here. Turn in your plot.
e) Matlab's command $\mathbf{r}=$ pole $(\mathbf{H})$, where H is the transfer function of the Butterworth filter, returns the poles of the transfer function in the array $\mathbf{r}$. Using Matlab's commands abs and angle, relate the magnitude of the poles to $\omega_{p}$, then plot the pole locations in the complex plane on a circle with radius $\omega_{p}$. (Note that angle returns angles in radians, and you probably want angle in degrees.) Note that the pole locations are all separated by an angle $\theta$. What is this angle?
$n$

> denominator(s)

1

$$
\frac{s}{\omega_{p}}+1
$$

2

$$
\left(\frac{s}{\omega_{p}}\right)^{2}+1.414\left(\frac{s}{\omega_{p}}\right)+1
$$

$$
3 \quad\left(\frac{s}{\omega_{p}}\right)^{3}+2\left(\frac{s}{\omega_{p}}\right)^{2}+2\left(\frac{s}{\omega_{p}}\right)+1
$$

$$
4 \quad\left(\frac{s}{\omega_{p}}\right)^{4}+2.6131\left(\frac{s}{\omega_{p}}\right)^{3}+3.4142\left(\frac{s}{\omega_{p}}\right)^{2}+2.6131\left(\frac{s}{\omega_{p}}\right)+1
$$

$$
5\left(\frac{s}{\omega_{p}}\right)^{5}+3.2361\left(\frac{s}{\omega_{p}}\right)^{4}+5.2361\left(\frac{s}{\omega_{p}}\right)^{3}+5.2361\left(\frac{s}{\omega_{p}}\right)^{2}+3.2361\left(\frac{s}{\omega_{p}}\right)+1
$$

Table 1: Denominators of Buterworth filter for filter orders 1-5. The numerator for the Butterworth filter is 1.
