

**ECE-320, Quiz #3**

Problems 1-3 refer to the following system:

1) Assuming the prefilter  $G_{pf}$  is 1, the **position error constant**  $K_p$  is best approximated as

- a)  $2/3$    b)  $2/5$    c) 1   d) 0

2) Assuming the prefilter  $G_{pf}$  is 1, the **steady state error** for a unit step is best approximated as

- a)  $1/3$    b)  $5/7$    c)  $3/5$    d)  $2/5$

3) The value of the prefilter  $G_{pf}$  that produces a **steady state error** of zero is:

- a) 1   b)  $7/2$    c)  $5/2$    d)  $7/5$

4) For the following system

The dynamic prefilter which cancels the closed loop zeros and produces a zero steady state error for a unit step input is

- a)  $\frac{11}{s+4}$    b)  $\frac{11}{2}$    c)  $\frac{11}{s+4}$    d)  $\frac{3}{s+4}$

Problems 5-7 refer to the following system

5) Assuming the prefilter  $G_{pf}$  is 1, the **velocity error constant**  $K_v$  is best approximated as

- a)  $2/3$    b)  $2/5$    c) 1   d) 0

6) Assuming the prefilter  $G_{pf}$  is 1, the **steady state error** for a unit ramp input is best approximated as

- a)  $1/2$    b) 1   c) 2   d)  $1/2$

7) Assuming the prefilter  $G_{pf}$  is 1, the **steady state error** for a unit step input is best approximated as

- a)  $\infty$    b) 0   c) 1   d)  $2/5$

8) Consider the closed loop system below:

If we want to use a dynamic prefilter to **cancel the closed loop zero** and produce a **zero steady state error for a unit step**, we should choose the prefilter as

- a)  $G_{pf}(s) = \frac{1}{s+1}$    b)  $G_{pf}(s) = \frac{5}{s+1}$    c)  $G_{pf}(s) = \frac{6}{s+1}$    d)  $G_{pf}(s) = \frac{7}{s+1}$

9) Is  $G_{pf}(s) = \frac{1}{(s-1)(s+2)}$  an acceptable prefilter (for any system)?

a) Yes b) No

Problems 10-12 refer to the following root locus plot for a unity feedback system with a plant and a controller.

10) Based on this root locus plot, the best estimate of the poles of the closed loop system are

a)  $-0.3+j7, -0.3-j7, -0.6$  b)  $1+j2, 1-j2, \text{ and } -3$

11) Is this a type one system? a) yes b) no

12) Is this a stable system? a) yes b) no

13) Consider the following root locus plot for a plant and controller in a unity feedback configuration.

If we want the system to be stable, should we

- a) increase the gain    b) decrease the gain    c) do nothing

Problems 14-19 refer to the following feedback system with plant  $G_p(s) = \frac{1}{(s+3)(s+4)}$

**14)** If we use a proportional controller  $G_c(s) = k_p$  will the system remain stable for all positive values of  $k_p$ ?

a) yes b) no

**15)** If we use a proportional controller  $G_c(s) = k_p$  is there any value of  $k_p$  for which the settling time is less than 0.5 seconds?

a) yes b) no

**16)** If we use an integral controller  $G_c(s) = \frac{k_i}{s}$  will the system remain stable for all positive values of  $k_i$ ?

a) yes b) no

**17)** If we use an integral controller  $G_c(s) = \frac{k_i}{s}$  is there any value of  $k_i$  for which the settling time is less than 0.5 seconds?

a) yes b) no

**18)** For which of the following PID controllers will the settling time be smaller as  $k \rightarrow \infty$

a)  $G_c(s) = \frac{k(s+2+j)(s+2-j)}{s}$     b)  $G_c(s) = \frac{k(s+4+2j)(s+4-2j)}{s}$

c) the results will be the same

**19)** For which of the following PD controllers will the settling time be smaller as  $k \rightarrow \infty$

a)  $G_c(s) = k(s+5)$     b)  $G_c(s) = k(s+10)$     c) the results will be the same

(Problems 20-22) The standard form for a PID controller is

$$G_c(s) = k_p + \frac{k_i}{s} + k_d s$$

For the following PID controller  $G_c(s) = \frac{5(s^2 + 2s + 1)}{s}$  determine  $k_p$ ,  $k_i$ , and  $k_d$
