

**ECE-320 Linear Control Systems
Winter-2012**

Dr. Bob Throne
x-8414, Room D-206

Text: There is no single textbook that works for all topics. For most of the topics we cover, I will put some notes on the class website. These notes are similar to the notes I will be using in class but will generally have different examples than those I use in class. However, these notes are not complete yet.

GRADING POLICY

Each Mid-Term Exam	15%
Final Exam	30%
Labs	10%
Homework/Matlab/Simulink	15%
Quizzes	15%

Notes:

- (1) You must have a passing average (greater than or equal to 60%) on the exams to pass the class!
- (2) Homework assignments are **due at the beginning of class on Tuesday**. No late homework will be accepted without prior approval.
- (3) You must acceptably complete each lab to pass the class.
- (4) For the majority of the labs, you will be required in the preceding homework to derive some relationships we will be using in lab or simulate a system (or systems). If you understand the homework the lab should not be a problem. You will be told which parts of the homework are required for the lab. You will receive a 0 on the corresponding lab if you have not done this acceptably! However, you must still complete the homework and do the lab to pass the course. **The prelab portions are to be done individually, not with your lab partner. They are part of the homework assignment.**
- (5) **The highest grade you can get on any lab is the grade you got on the prelab**
- (6) Many of the homework problems will require you to use Matlab or Simulink as part of the problem. If you do not do these parts of the problem, do not expect to receive credit for any parts of the problem.
- (7) You are expected to do your own work. You can certainly talk with each other and help each other, but the work you hand in should be your own. As an example, if two people hand in the same Simulink plot and both came from the same directory, neither will receive any points!
- (8) Unless specifically told otherwise on a particular problem, you are expected to work out the problem by hand (or use Matlab). *If you write on your assignment that you used Maple and are copying the answer, expect to get no points.* You can use Maple to check your answers. You cannot turn in any Maple code or plot as part of the solution to a problem.

Quizzes:

Each week we will have a quiz, usually (though not always) on Thursday. Usually before the quiz a “practice quiz” will be posted to give you an idea of the kinds of problems you are expected to be able to solve on that week’s quiz.

Labs:

- 1) **You cannot use your laptop during the lab except for transferring files or running simulations.** Points will be deducted for inappropriate behavior.
- 2) You will work in groups of two, though a few groups will have three.
- 3) You must write a short memo summarizing your results and *e-mail the memo to me*. This memo is due *before your next lab period*. You should include *as attachments* in the memo the plots and you made for the lab. The lab write up is to be computer generated and each graph needs to be labeled as a figure (with a caption). Usually students find it easier to just copy and paste all the figures they need into a document and explain the figure or answer questions as they are doing the lab. *For the most part, the memos should be short since I mostly look at the pictures.*
- 4) You are expected to do the labs during the assigned lab time each week. If for some reason you do not finish during this time, you may finish on your own time. **However, this does not mean you are free to do the labs whenever you want.**
- 5) You are required to leave the software you used for each lab on the computer you used for the lab. **If I check on your folder and the code necessary for a lab is not present and you have turned in a lab report, you will fail the course and be charged with academic misconduct.**
- 6) Each lab group is to write/edit their own code. It is certainly acceptable to talk with other groups and, with their knowledge and permission, look at their code. However, you cannot take their code (and they cannot give it to you), unless you have my explicit permission to do so (it may be necessary in unusual circumstances). **If you take or share electronic files (code) without my permission, you will fail the course and be charged with academic misconduct.**

SYLLABUS

Class 1 (11/26) – Laplace transforms, feedback systems

Class 2 (11/27) –, Block diagrams and Mason's rule, model matching

No Lab

Class 3 (11/29) – 2nd order systems, performance specifications

Class 4 (12/3) – Steady state errors, system type, controller types (P, I, D, Lead)

Class 5 (12/4) – Root locus

Lab 1 – System Identification and Model Matching Control of 1 dof Systems

Class 6 (12/6) – Root locus

Class 7 (12/10) – Root locus

Class 8 (12/11) – System sensitivity

Lab 2- Root Locus Design (Matlab's sisotool)

Class 9 (12/13) – System sensitivity

Class 10 (12/17) – State variable systems

Class 11 (12/18) – State variable systems

Lab 3 – Root Locus (PID) Design

Class 12 (12/20) – **Exam 1**

Winter Break

Class 13 (1/7) – State variable feedback

Class 14 (1/8) – Discrete-time systems and convolution

Lab 4- PI-D and I-PD Configurations

Class 15 (1/10) – z-transforms

Class 16 (1/14) – Settling time, final value theorem

Class 17 (1/15) – Discrete-time controllers

Lab 5- State Variable Control for an Inverted Pendulum

Class 18 (1/17) – Inverse z-transforms

Class 19 (1/21) - Inverse z-transforms

Class 20 (1/22) - Sampling transfer functions

Lab 6 – Discrete-time PID Control

Class 21 (1/24) – **Exam 2**

Class 22 (1/28) – Discrete-time state equations

Class 23 (1/29) – Discrete-time state equations

Lab 7 – Introduction to the Microchip dsPIC

Class 24 (1/31) – Discrete-time state equations

Class 25(2/4) – Bode plots, gain and phase margins

Class 26 (2/5) – Bode plots, phase lead controllers

Lab 8- PID Control of a Simple Wheel

Class 27 (2/7) – Bode plots, phase lead controllers

Class 28 (2/11) – Nyquist plots

Class 29 (2/12) – Nyquist plots

Lab 9- PID Control of a Simple Wheel

Class 30 (2/14) – Nyquist plots
