

Project Documentation (Slide Show)

All Sections

Due: By email before the final exam

What: A few slides (7 or so) on your project. The slides can be Powerpoint or Adobe pdf, whichever you prefer.

Goals:

1. Document your project.
2. Use these slides in introducing ME430 in future quarters.

We will be much happier with a few nicely done, coherent slides than we will with a lot of slides that ramble.

Things to include (use pictures where appropriate):

1. Your names and the name of your project
2. Overall project objective—what were you trying to do?
3. What inputs? How sensed?
4. How did you use the PIC as the controller? Did you use interrupts, timers, PWM?
5. What outputs? How created?
6. Results: did it work as planned?
7. Advice to future “generations” (classes)
