

Updating / Reinstalling SolidEdge

Note: If you already have a copy of SolidEdge on your computer, even if it's an older version, you can ignore this pdf. Open SolidEdge then watch the video.

If you don't have SolidEdge anymore or if you'd like to update to the newest version, here are some instructions...

You can download the latest version of SolidEdge off of DFS.
On 9/26/08 the latest version was V20, but I'm sure that will change with time.

To get to DFS, click on the My Network Places icon
Click on DFS Root (if you do not have a DFS Root icon, see the option below)
Go to

\\Rose-hulman.edu\dfs\Software\Course Software\Solid Edge V20

run the Setup.exe file (takes a bit) then after installation run the SELicense.exe file so that you have rights to use the program

Note: If you have a copy of SolidWorks and prefer it, that's fine. You can use SolidWorks.

Options if you do not have a DFS Root icon with My Network Places:

Option #1. Click on the start menu, click on "Run..." and type in \\rose-hulman.edu\dfs

Option #2. Try to get to the same location via \\tibia

Option #3. Visit IAIT
