

ROSE-HULMAN INSTITUTE OF TECHNOLOGY
Institute Planning Workshop
August 17, 2006

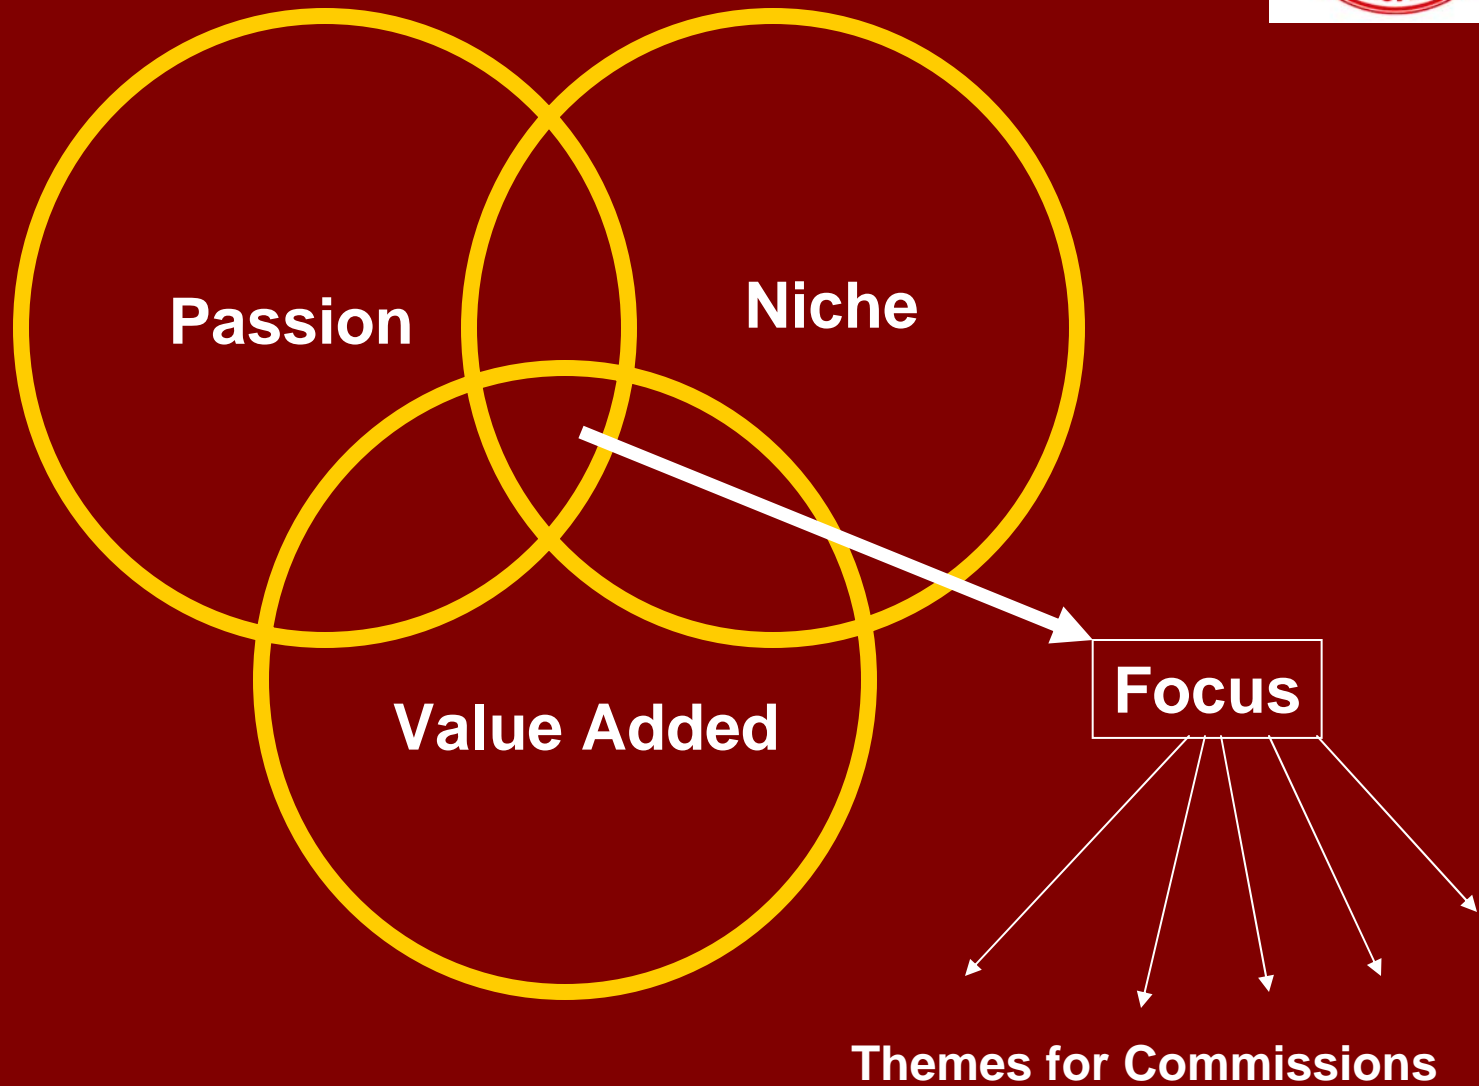

Intersection of Points

*What are we deeply
passionate about?*

*What can we be
the best at in
the world?*

*What drives our
economic
engine?*

What is “Focus”?

Full development of human
potential

What Aspects of Human Potential?

- **social development**
- **technical development**
- **leadership development**
- **citizenship development**

Elements of Focus

- At intersection of the Rose-Hulman Community's *passions, niche roles, and economic value* lies the personal development of its community members. **Personal development** is interpreted in the broadest sense to include technical development, citizenship development, leadership development, and social development.

- Technical development includes a rigorous foundation in the fundamentals of mathematics, science, and engineering that leads, not only to a quality post-baccalaureate placement, but lays the foundation for a rewarding career.

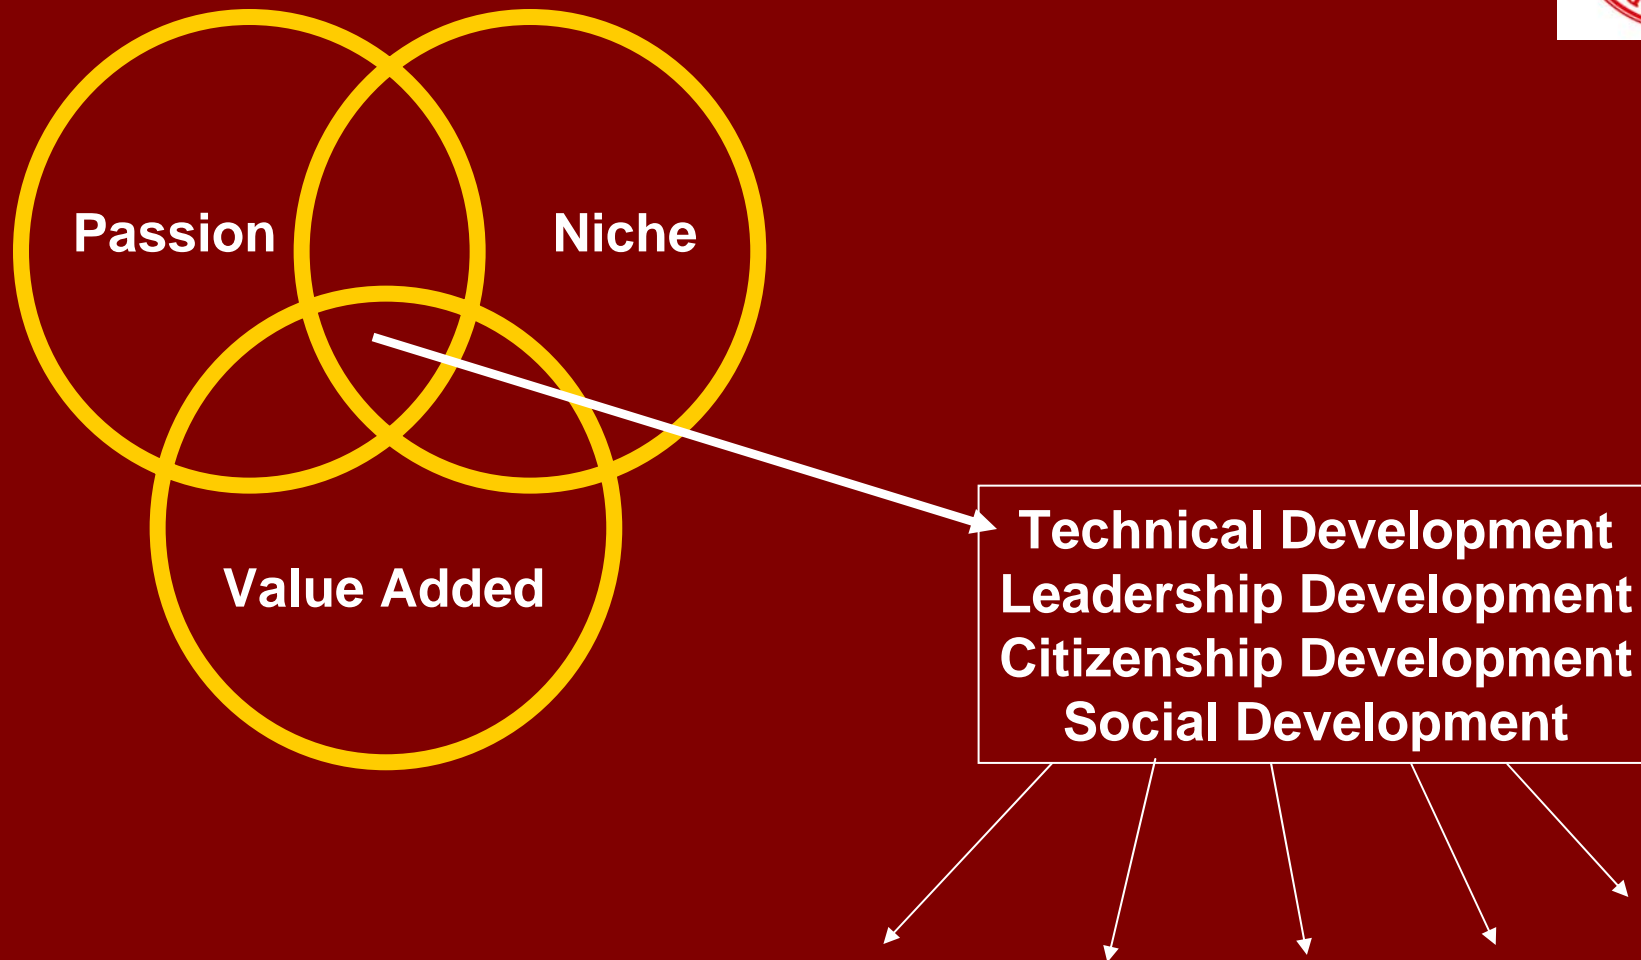

- Citizenship development includes gaining a commitment to enhancing the global community through service to individuals, local community and humankind in the most global sense.

- Leadership development includes the ability to communicate effectively, to exhibit life-long learning, especially of skills required to assist others to reach their full potential.

- Social development includes growth in interpersonal skills, in appreciation of the arts and humanities, and in the development of life-long relationships with other persons and groups.

Themes for Commissions (e.g. Institute size, facilities, degrees)
