Due Date: Friday November 6 at 5:15 PM, 2009

Problems

1. Determine the transfer function \( H(\omega) \) that would produce the following input/output relationships. Simplify your answers as much as possible.
   a) \( y(t) = ax(t - b) \)
   b) \( y(t) = ax(t + b) + ax(t - b) \)
   c) \( y(t) = x(t) * e^{-t}u(t - b) \)

2. Using the duality property, find the corresponding Fourier transform for the following:
   a) \( g(t) = \text{sinc}^2(Bt) \)
   b) \( g(t) = \text{sinc}(Wt) \)
   c) \( g(t) = \delta(t) \)
   d) \( g(t) = \cos(\omega_0 t) \)

Do not just look up the pairs from the table (though you can use any other pairs except the one you are trying to find).

3. Consider a linear time invariant system with transfer function given by
   \[
   H(\omega) = \begin{cases} 
   5e^{-i2\omega} & |\omega| \leq 2 \\
   0 & \text{else}
   \end{cases}
   \]
   with input \( x(t) = \frac{8}{\pi} \text{sinc}^2\left(\frac{2(t-1)}{\pi}\right) \). The output of the system is \( y(t) \).
   a) Determine \( X(\omega) \).
   b) Sketch the spectrum of \( X(\omega) \) (magnitude and phase) accurately labeling the axes and important points.
   c) Sketch the spectrum of \( H(\omega) \) (magnitude and phase) accurately labeling the axes and important points.
   d) Determine \( y(t) \), the output of the system.

   \[ \text{Answer: } y(t) = \frac{20}{\pi} \text{sinc} \left[ \frac{2}{\pi} (t - 3) \right] + \frac{10}{\pi} \text{sinc}^2 \left[ \frac{1}{\pi} (t - 3) \right] \]

Fall 2009
4. Consider a linear time invariant system with impulse response given by
   \[ h(t) = \frac{1}{2\pi} \text{sinc} \left( \frac{t-2}{2\pi} \right) \]
   with input \( x(t) = \frac{4}{\pi} \text{sinc} \left( \frac{2t}{\pi} \right) \cos(t) \). The output of the system is \( y(t) \).
   
   a) Determine \( X(\omega) \).
   
   b) Sketch the spectrum of \( X(\omega) \) (magnitude and phase) accurately labeling the axes and important points.
   
   c) Determine the energy in \( x(t) \)
   
   d) Determine \( H(\omega) \).
   
   e) Sketch the spectrum of \( H(\omega) \) (magnitude and phase) accurately labeling the axes and important points.
   
   f) Determine \( y(t) \), the output of the system.
   
   g) Determine the energy in \( y(t) \).

5. Find the fraction of the total signal energy (as a percentage) contained between 100 and 300 Hz in the signal \( x(t) \) given below:
   \[ x(t) = 5 \text{sinc} \left( \frac{t}{0.002} \right) + 5 \text{sinc} \left( \frac{t}{0.001} \right) \]
   Answer 56%

6. Consider the signal \( x(t) = \cos(2t) + \cos(3t) \)
   
   a) Sketch the spectrum of \( X(\omega) \)
   
   b) \( x(t) \) is the input to an ideal sampler sampling at rate \( f_s = \frac{2}{\pi} = \frac{1}{T} \) seconds.
   Sketch the spectrum of the sampled signal \( X_s(\omega) \).
   
   c) Assume \( x_s(t) \) is the input to an ideal lowpass filter with a cutoff frequency of 4 rad/sec and passband gain of \( T \). Determine the output signal \( x_s(t) \) and write it in terms of the original signal \( x(t) \) plus any aliased terms.
7. In this problem we will go over some of the Fourier series and Fourier transform results we need to understand impulse sampling.

a) Assume we have periodic function \( p(t) \) with Fourier series representation

\[
p(t) = \sum_{k=-\infty}^{\infty} c_k e^{i k \omega_0 t}
\]

and we construct the function \( x_s(t) = x(t) p(t) \). Show that in the frequency domain we have

\[
X_s(\omega) = \sum_{k=-\infty}^{\infty} c_k X(\omega - k \omega_0)
\]

b) Show that the Fourier series for the (periodic) impulse train

\[
p(t) = \sum_{k=-\infty}^{\infty} \delta(t - k T_0)
\]

Is given by

\[
p(t) = \sum_{k=-\infty}^{\infty} \frac{1}{T_0} e^{i k \omega_0 t}, \quad \omega_0 = \frac{2\pi}{T_0}
\]

c) Combine the previous two parts to show

\[
X_s(\omega) = \sum_{k=-\infty}^{\infty} \frac{1}{T_0} X(\omega - k \omega_0)
\]

8. (Matlab) This problem is a continuation of Problem 7, but you only need to use the results of that problem. There are three important things you should know about impulse sampling

- If the original signal \( x(t) \) is sampled with an impulse train with period \( T_0 \) (the time between samples is \( T_0 \)) then the spectrum of the original signal, \( X(f) \) (or \( X(\omega) \)), will be replicated every \( f_0 = \frac{1}{T_0} \) Hz (or \( \omega_0 \) radians/sec) in the spectrum of the sampled signal, \( X_s(f) \) (or \( X_s(\omega) \)).

- The replicated spectra \( X(f) \) (or \( X(\omega) \)) will be scaled by \( \frac{1}{T_0} \).

- If we want to recover the original signal from the sampled signal, we need to be able to isolate one instance of the original signal’s spectrum by lowpass filtering.

The Matlab routine `impulse_sampling.m` illustrates the effects of sampling the signal

\[
x(t) = \text{sinc}^2\left(\frac{t}{0.0002}\right)
\]

Fall 2009
using a sampling rate of $f_0 = 20,000 Hz$ and then filtering to try and reconstruct
the original signal. You do not need to understand what this routine is doing, you
will only be modifying it a bit and trying to understand what is happening. Run the
routine as it is for parts b, c, and d and turn in this plot.

a) Show that for this function $X(\omega) = 0.0002A \left( \frac{\omega}{(2\pi)5000} \right)$

b) Verify that the spectrum of the replicated signal $X(\omega)$ has the correct
bandwidth

c) Verify that the replicated signal $X_s(\omega)$ has maximum amplitude equal to
$\frac{1}{T_0} \max \{|X(\omega)|\}$

d) Verify that the signal is replicated every $f_0 = 20,000 Hz$

The bottom panel (and the second figure) shows the original signal and the
signal we tried to reconstruct after sampling. If our sampling is effective we
should be able to reconstruct the original signal.

e) Modify the lowpass filter (lines 59 and 60) so that we get a reasonably good
approximation of the original signal. Turn in your plots.

f) Modify the sampling rate (line 31) so you are sampling at 15 kHz, 10 KHz, and
then 7.5 kHz. Turn in your plots. Notice where the replicated signals are located.
Are you able to reconstruct the original signal for these sampling rates?
5. \( y(t) = ax(t-b) \)
   \[
   Y(\omega) = a j\omega X(\omega) e^{-j\omega b} \quad [H(\omega) = j\omega ae^{-j\omega b}] 
   \]

6. \( y(t) = a x(t+b) + a x(t-b) \)
   \[
   Y(\omega) = a X(\omega) e^{j\omega b} + a \overline{X(\omega)} e^{-j\omega b} \\
   = a \left[ e^{j\omega b} + e^{-j\omega b} \right] X(\omega) \\
   = 2a \cos(\omega b) X(\omega) \quad [H(\omega) = 2a \cos(\omega b)] 
   \]

7. \( y(t) = x(t) * e^{-t} u(t-b) \)
   \[
   Y(\omega) = \overline{X(\omega)} \mathcal{F}\{e^{-t} u(t-b)\} \\
   = \int_{-\infty}^{\infty} e^{-t} u(t-b) e^{-j\omega t} dt = \int_{b}^{\infty} e^{-(t+j\omega)t} dt \\
   = \frac{e^{-(t+j\omega)b}}{-(t+j\omega)} \bigg|_{b}^{\infty} = \frac{e^{-b e^{-j\omega b}}}{1+j\omega} = \frac{e^{-b e^{-j\omega b}}}{1+j\omega} 
   \]
   \( e^{-t} u(t-b) = e^{-(t-b)} e^{-b} u(t-b) = e^{-b} e^{-(t-b)} u(t-b) \)
   \[
   \mathcal{F}\{e^{-b} e^{-(t-b)} u(t-b)\} = \frac{e^{-b e^{-j\omega b}}}{1+j\omega} 
   \]
   \[
   H(\omega) = \frac{1}{j\omega} \frac{e^{-b e^{-j\omega b}}}{1+j\omega} 
   \]
a) \( g(t) = \text{sinc}^2(\beta t) \)

From the table,

\[ g_1(t) = \mathcal{N} \left( \frac{t}{W} \right) \leftrightarrow G_1(\omega) = W \text{sinc}^2 \left( \frac{\omega}{2\pi W} \right) \]

By duality,

\[ g_2(t) = G_1(t) = W \text{sinc}^2 \left( \frac{\omega}{2\pi W} \right) \leftrightarrow G_2(\omega) = 2\pi g_1(-\omega) = 2\pi \mathcal{N} \left( \frac{\omega}{W} \right) \]

\[ B = \frac{W}{2\pi} \quad \text{so} \quad W = 2\pi B \]

\[ g_2(t) = 2\pi B \text{sinc}^2(\beta t) \leftrightarrow G_2(\omega) = 2\pi \mathcal{N} \left( \frac{\omega}{2\pi B} \right) \]

or

\[ \text{sinc}^2(\beta t) \leftrightarrow \frac{1}{B} \mathcal{N} \left( \frac{\omega}{2\pi B} \right) \]

b) \( g(t) = \text{sinc} (\omega t) \)

From the table,

\[ g_1(t) = \text{rect} \left( \frac{t}{T} \right) \leftrightarrow G_1(\omega) = T \text{sinc} \left( \frac{T}{2\pi} \omega \right) \]

By duality,

\[ g_2(t) = G_1(t) = T \text{sinc} \left( \frac{T}{2\pi} t \right) \leftrightarrow G_2(\omega) = 2\pi g_1(-\omega) = 2\pi \text{rect} \left( \frac{\omega}{T} \right) \]

\[ W = \frac{T}{2\pi} \quad \text{or} \quad T = 2\pi W \]

\[ g_2(t) = 2\pi W \text{sinc}(\omega t) \leftrightarrow 2\pi \text{rect} \left( \frac{\omega}{2\pi W} \right) \]

\[ \text{sinc}(\omega t) \leftrightarrow \frac{1}{W} \text{rect} \left( \frac{\omega}{2\pi W} \right) \]
(c) \( g(t) = \delta(t) \)

from the table
\[
g_1(t) = 1 \iff G_1(\omega) = 2\pi \delta(\omega)
\]

by duality
\[
g_2(t) = G_1(t) = 2\pi \delta(t) \iff G_2(\omega) = 2\pi g_1(-\omega) = 2\pi \delta(\omega)
\]

\[
\delta(t) \iff 1
\]

(d) \( g(t) = \cos(\omega_0 t) \)

For \( G(\omega) = \cos(\Omega_0 t) = \frac{1}{2}e^{j\omega_0 t} + \frac{1}{2}e^{-j\omega_0 t} \iff g(t) = \frac{1}{2} \delta(t+\tau) + \frac{1}{2} \delta(t-\tau) \)

so \( g_1(t) = \frac{1}{2} \left[ \delta(t+\tau) + \delta(t-\tau) \right] \iff G_1(\omega) = \cos(\Omega_0 t) \)

by duality
\[
g_2(t) = G_1(t) = \cos(\Omega_0 t) \iff G_2(\omega) = 2\pi g_1(-\omega) = \pi \delta(-\omega+\Omega_0) + \pi \delta(-\omega-\Omega_0) \]

\[
\cos(\omega_0 t) \iff \pi \delta(\omega-\omega_0) + \pi \delta(\omega+\omega_0)
\]

\( \delta() \) is an even function
\( x(t) = \frac{2}{\pi} \sin^2 \left( \frac{2(t-1)}{\pi} \right) \)

\( H(\omega) = \left\{ \begin{array}{ll} S_e^{-j2\omega} & 0 < \omega < 2 \\ 0 & \text{otherwise} \end{array} \right. \)

\text{a) for } x(t) = \sin^2 \left( \frac{2t}{\pi} \right) \quad \Rightarrow \quad X(\omega) = \frac{\pi}{2} \mathcal{N} \left( \frac{\omega}{4} \right) \)

\text{so } \overline{X}(\omega) = 4 \mathcal{N} \left( \frac{\omega}{4} \right) e^{-j\omega} \)

\text{b) } \big| \overline{X}(\omega) \big| \quad \bigg| \begin{array}{c} \text{Plot of } \overline{X}(\omega) \end{array} \)

\text{c) } |H(\omega)| \quad \bigg| \begin{array}{c} \text{Plot of } H(\omega) \end{array} \)

\text{d) } |Y(\omega)| \quad \bigg| \begin{array}{c} \text{Plot of } Y(\omega) \end{array} \)

\[ Y(\omega) = \left[ 10 \text{rect} \left( \frac{\omega}{4} \right) + 10 \mathcal{N} \left( \frac{\omega}{2} \right) \right] e^{-j3\omega} \]

\[ \text{rect} \left( \frac{\omega}{2\pi W} \right) \leftrightarrow W \sin c (Wt) \quad W = \frac{2}{\pi} \]

\[ \mathcal{N} \left( \frac{\omega}{2\pi B} \right) \leftrightarrow B \sin c^2 (Bt) \quad B = \frac{1}{\pi} \]

\[ y(t) = \frac{20}{\pi} \sin c \left( \frac{3}{\pi} (t-3) \right) + 10 \sin c^2 \left( \frac{1}{\pi} (t-3) \right) \]
\[ P(t) = \frac{1}{2\pi} \sin \left( \frac{2\pi t}{2\pi} \right) \quad X(t) = \frac{4}{\pi} \sin \left( \frac{2\pi t}{\pi} \right) \cos(t) \]

a) For \( x_1(t) = \sin \left( \frac{3t}{\pi} \right) \quad X_1(w) = \frac{\pi}{2} \text{rect} \left( \frac{w}{2\pi}, \frac{3}{\pi} \right) = \frac{\pi}{2} \text{rect} \left( \frac{w}{4} \right) \)
For \( x_2(t) = \frac{4}{\pi} x_1(t) \quad X_2(w) = 2 \text{rect} \left( \frac{w}{4} \right) \)
For \( x_3(t) = x_2(t) \cos(t) \quad X_3(w) = \text{rect} \left( \frac{w+1}{4} \right) + \text{rect} \left( \frac{w-1}{4} \right) \]

b) \[ |X(w)| \]
\[ x \cdot H(w) = 0 \]

\[ E_x = \frac{1}{2\pi} \left[ \int_{-1}^{-1} x^2 dt + \int_{1}^{1} x^2 dt + \int_{3}^{3} x^2 dt \right] = \frac{1}{2\pi} \left[ 2 + 4 \cdot 2 + 3 \right] = \frac{6}{\pi} \]

d) \[ h(t) = \frac{1}{2\pi} \sin \left( \frac{t-2}{2\pi} \right) \]
For \( h_1(t) = \sin \left( \frac{t-2}{\pi} \right) \quad H_1(w) = 2\pi \text{rect} \left( \frac{w}{2\pi}, \frac{1}{\pi} \right) = 2\pi \text{rect} \left( w \right) \)
For \( h_2(t) = \frac{1}{2\pi} h_1(t) \quad H_2(w) = \text{rect} \left( w \right) \)
For \( h_3(t) = h_2(t-2) \quad H_3(w) = e^{-j2w} H_2(w) = \left[ \text{rect}(w) e^{-j2w} \right] = H_1(w) \)

e) \[ |H(w)| \quad \& \quad H(w) \]

f) \[ y_1(w) = 2 \text{rect}(w) e^{-j2w} \]
\[ T(\theta) = \frac{1}{\pi} \sin \left( \frac{t-2}{2\pi} \right) \]

\[ E_y = \frac{1}{2\pi} \int_{-\frac{\pi}{2}}^{\frac{\pi}{2}} 2^2 dw = \frac{4}{\pi} = \frac{2}{\pi} = E_y \]
\[ X(t) = 5 \cdot \text{sinc} \left( \frac{t}{0.002} \right) + 5 \cdot \text{sinc} \left( \frac{t}{0.001} \right) \]

Compute the % of energy between 100 and 300 Hz.

For \( \text{sinc}(Wt) \leftrightarrow \frac{1}{W} \text{rect} \left( \frac{W}{2\pi W} \right) \)

- For \( W = \frac{1}{0.002} = 500 \) or \( W = \frac{1}{0.001} = 1000 \)

\[
X(w) = \frac{5}{500} \text{rect} \left( \frac{w}{2\pi \cdot 500} \right) + \frac{5}{1000} \text{rect} \left( \frac{w}{2\pi \cdot 1000} \right)
\]

\[
= 0.01 \text{rect} \left( \frac{w}{2\pi \cdot 500} \right) + 0.005 \text{rect} \left( \frac{w}{2\pi \cdot 1000} \right)
\]

\[
E_{\text{total}} = \frac{1}{2\pi} \int_{-2\pi \cdot 500}^{2\pi \cdot 500} |X(w)|^2 dw = \frac{1}{2\pi} \int_{-2\pi \cdot 500}^{2\pi \cdot 500} \left( 2 \cdot (0.005) \right)^2 dw
\]

\[
= \frac{1}{2\pi} \left[ 2 \cdot (2\pi \cdot 500) (0.005)^2 + 2 \cdot (2\pi \cdot 1500) (0.005)^2 \right]
\]

\[
= 0.125 \cdot (0.005)^2 + 2 \cdot 150 \cdot (0.005)^2 = 0.00625 = E_{\text{total}}
\]

\[
E_{\text{band}} = \frac{1}{2\pi} \int_{-2\pi \cdot 150}^{2\pi \cdot 150} (0.005)^2 dw + 2 \int_{-2\pi \cdot 150}^{2\pi \cdot 150} (0.015)^2 dw
\]

\[
= \frac{1}{2\pi} \left[ 2 \cdot (2\pi \cdot 150) (0.005)^2 + 2 \cdot (2\pi \cdot 150) (0.015)^2 \right]
\]

\[
= 2 \cdot 150 \cdot (0.005)^2 + 2 \cdot 150 \cdot (0.015)^2 = 0.05625 = E_{\text{band}}
\]

\[
\text{Ratio} = \frac{0.00625}{0.05625} = 0.111 \approx 56.9\%
\]
(a) $X(t) = \cos(2t) + \cos(3t)$

$\omega_0 = \frac{\omega}{2} = \frac{\pi}{2} \quad \Rightarrow \quad \omega_0 = \frac{2\pi}{2} = \pi \text{ rad/sec}$

(b) $Z_s(t)$

(c) $X(t) = \cos(2t) + 2\cos(3t) + \cos(3t)$

$= \cos(2t) + \cos(3t) + \left[ \cos(t) + \cos(2t) \right]$  

$= \underbrace{X(t) + \left[ \cos(t) + \cos(2t) \right]}_{\text{limited}}$
\[ p(t) = \sum_{k=0}^{\infty} e^{jkw_0 t} \]

\[ X_s(t) = X(t) \cdot p(t) \]

\[ I_s(w) = \frac{1}{2\pi} \mathcal{F}\{ X(w) \} \cdot \mathcal{F}\{ p(w) \} = \sum_{k=0}^{\infty} \int_{-\infty}^{\infty} e^{jkw_0 t} \mathcal{F}\{ X(w) \} \mathcal{F}\{ p(w) \} \]

\[ I_s(w) = \frac{1}{2\pi} \mathcal{F}\{ X(w) \} \sum_{k=0}^{\infty} \mathcal{F}\{ e^{jkw_0 t} \} \]

\[ I_s(w) = \sum_{k=0}^{\infty} \mathcal{F}\{ X(w-kw_0) \} \]

\[ p(t) = \sum_{k=-\infty}^{\infty} \delta(t - nT_o) \quad \text{periodic with period } T_o \]

\[ c_k = \frac{1}{T_0} \int_{-T_o/2}^{T_o/2} e^{-jkw_0 t} \mathcal{L}(t) dt \]

\[ c_k = \frac{1}{T_0} \]

\[ p(t) = \sum_{k=-\infty}^{\infty} \frac{1}{T_0} e^{jkw_0 t} \]

\[ I_s(w) = \sum_{k=-\infty}^{\infty} \frac{1}{T_0} \mathcal{F}\{ X(w-kw_0) \} \quad \text{just substitute } c_k = \frac{1}{T_0} \text{ into (5)} \]
\( x(t) = \text{sinc}^2 \left( \frac{t}{0.0002} \right) = \text{sinc}^2 \left( \frac{Bt}{2} \right) \quad B = 0.0002 \)

\( X(\omega) = \frac{1}{2} \left[ \frac{\omega}{2B} \right] = 0.0002 \left[ \frac{\omega}{2 \pi (5000)} \right] \)

6. \( 3W = 10,000 \text{ Hz} \) (5000 on each side)

5. \( T_0 = \frac{1}{f_0} = \frac{1}{20,000} = 0.00005 \quad \text{max} = \frac{0.0002}{0.0005} = 4 \)
