Example Problem - Le 22

7.27 Arm BC has a mass of 12 kg and the mass moment of inertia about its center of mass is 3 kg·m². If arm AB has a constant clockwise angular velocity of 2 rad/s and arm BC has a counterclockwise angular velocity of 2 rad/s and a clockwise angular acceleration of 4 rad/s², determine:

a) the couple exerted on arm BC at B,

b) the reaction at B
