

# Welcome to Ball Worlds

Communities of interacting objects; UML

BallWorlds Intro

Work on BallWorlds

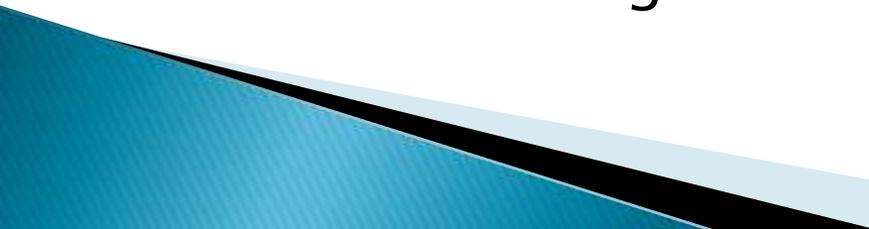

# Interaction in UML Diagrams

- ▶ Many "real" programs involve dozens or hundreds of classes, with complex interactions among objects from those classes.
  - ▶ For large programs can't just start writing code and hope it works out!
  - ▶ UML Class Diagrams can help us to visualize the classes and their interactions before we write the code.
- 

# BallWorlds Intro

- ▶ We've done "from scratch" programs and programs with small templates
  - ▶ BallWorlds is more realistic:
    - You'll write a small part of a larger program, already begun by others
    - Your parts have to fit with the other parts
    - You'll have to spend some time understanding the other parts in order to succeed.
- 

# Goals

- ▶ Learn to read and use UML Class Diagrams to understand existing code
  - ▶ Practice analyzing what features of existing code are relevant to your task
  - ▶ Use inheritance to solve problems
  
  - ▶ Demo:
    - Demonstrate the program
    - Can we change the number of worlds?
- 

# Creation of the Worlds

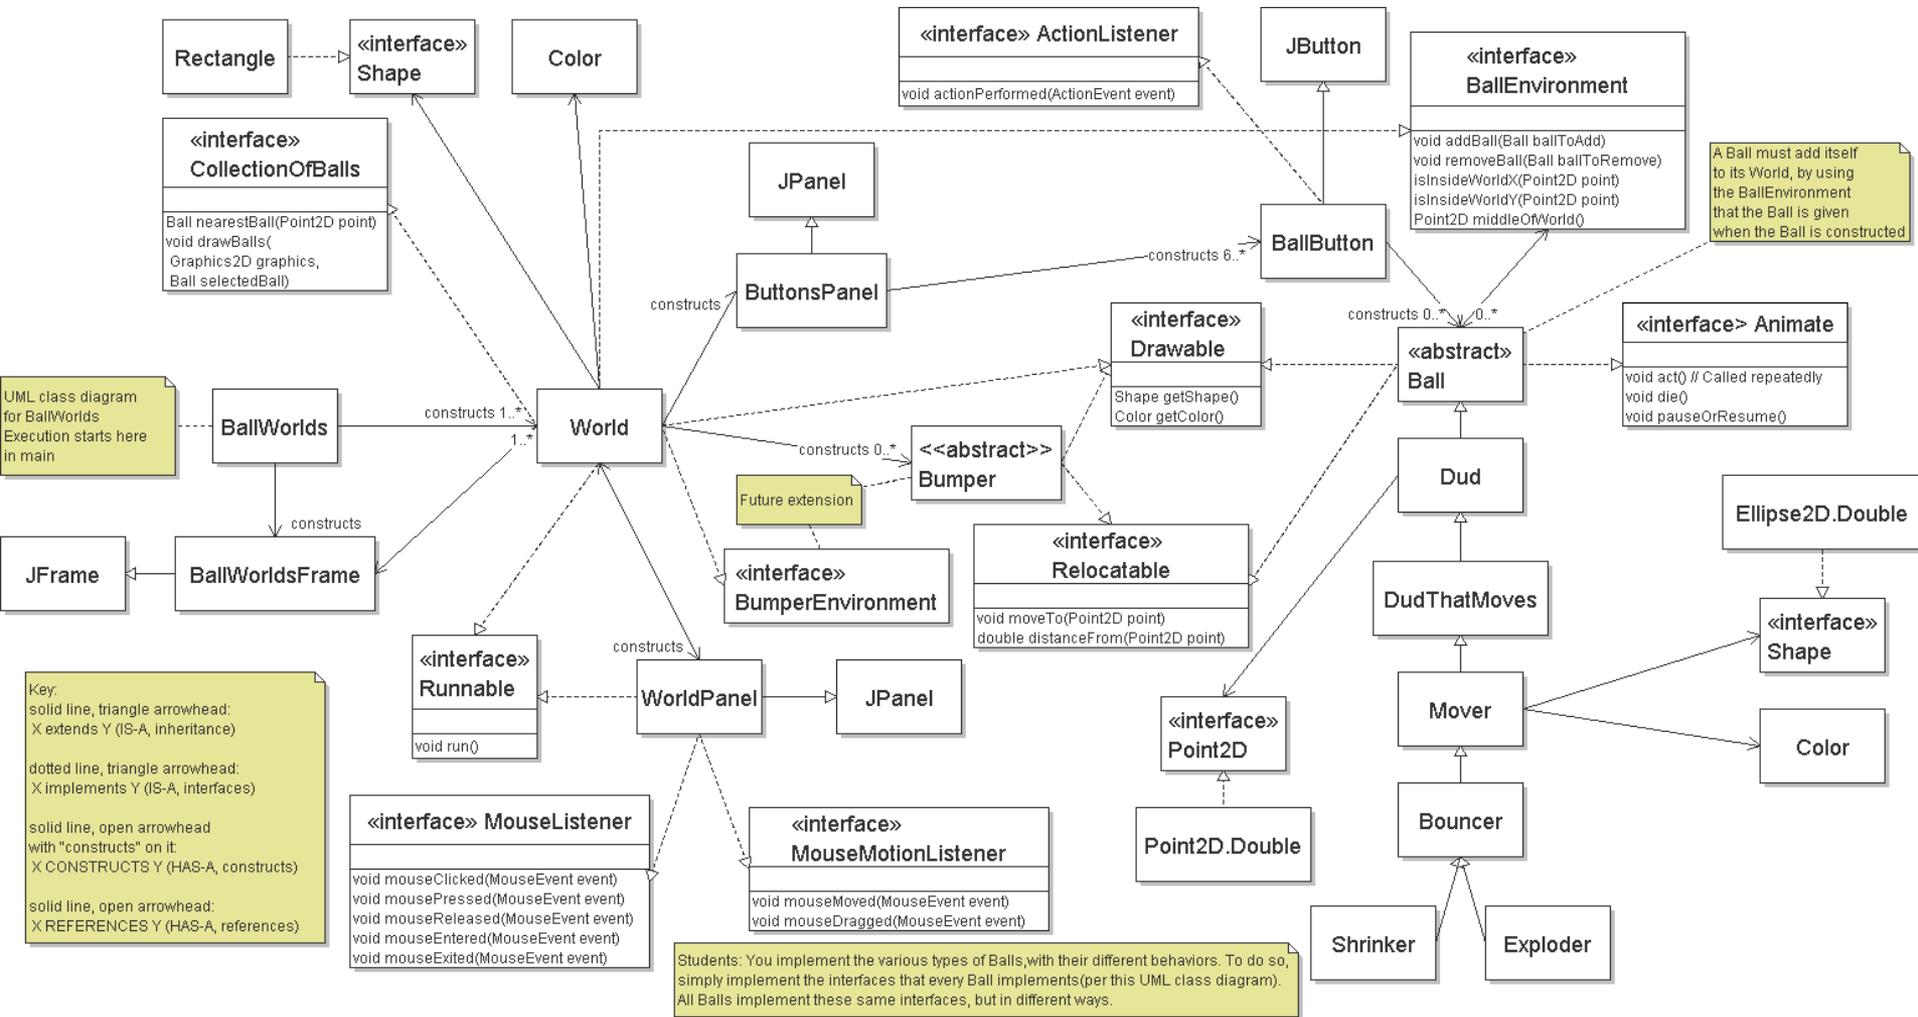

```
/*
 * Makes the given number of Worlds, giving each the given frame.
 * Rotates between 3 pre-assigned sizes and colors for the Worlds.
 */
private static void makeWorlds(int numberOfWorlds,
                                BallWorldsFrame frame) {
    ArrayList<Dimension> dimensions = new ArrayList<Dimension>();
    ArrayList<Color> colors = new ArrayList<Color>();

    dimensions.add(BallWorlds.world1Size);
    dimensions.add(BallWorlds.world2Size);
    dimensions.add(BallWorlds.world3Size);

    colors.add(BallWorlds.world1Color);
    colors.add(BallWorlds.world2Color);
    colors.add(BallWorlds.world3Color);

    for (int k = 0; k < numberOfWorlds; ++k) {
        new World(dimensions.get(k % 3), colors.get(k % 3), frame);
    }
}
```

# UML Class Diagram for BallWorlds

# Ball Class

- ▶ Abstract
  - ▶ Implements which interfaces?
  - ▶ What data might be needed for every kind of Ball?
  
  - ▶ Let's do a little bit of code exploration, then write Dud together.
-
