

Making a project website on Angel

The following is obtained from the Angel Help documentation and has been modified for the purpose of this class.

Your group has been given project space on ANGEL. You are required to create a project webpage, which will be used by the grader, your instructor and your team.

Here are the instructions on how to create the website.

1. Select your course from **My Page** (if you are not on **My Page**, either log in or click on the **My Page** link in the top right corner of your page).
2. Click the **In Touch Tab** at the top of the page (or on the left side of the page in your Map).
3. Since your instructor has you in a group with file space, you will have a section called **Team Files**.
4. To make a project website, simply open your team's files. You may upload any work you already have, but note that in order for this to act as a project webpage, the index file (the one that the project is supposed to automatically open) **MUST** be called **default.htm**. Any other files are up to you.
5. In order to upload files, click on the **Add content** link in the toolbar. It will present you with 4 options:
 1. **Create a folder**
 2. **Create a file**

This allows you to create a file from scratch.

1. If you do not know html, feel free to use the **HTML Editor** (link below the large text box).
2. Just insert your html code into the **File Contents** box and give the file a name in the **File Name** box.
3. Hit **OK** when finished.

3. Upload Files

This allows you to upload any existing files or files you may have created in Microsoft Frontpage. If you upload a group of webpages zipped together in .zip format, ANGEL gives you the option to extract them so that the collection of files links correctly to each other if you are using relative linking.

1. Click **Choose**. You will be given an Open dialogue, browse to your file then click **Open**.
2. Click **Upload File**. You will be taken to a screen that will give you the address of the file (if you wanted to reference it from outside of ANGEL, for example) and ask if you want to **Upload Another File**, if you are **Done** or if you would like to **Exit Team Files**. Select the appropriate option.

4. **Drag-n-Drop**

If you use Internet Explorer 6+, Netscape 7.1, or Mozilla 1.4 then you may use the **Drag-n-Drop** button.

1. When you click **Drag-n-Drop**, the window will change and you will be instructed to Drag and Drop Files Here. Do that and click **Exit Drag-n-drop**. You will be returned to the previous window and you can now hit **Finished**.
