<u>Installation for Linux</u>

A. Installing Python and Pygame

1. Open up a **Terminal** window (Click on "Finder" then "Applications" and then open "Utilities." Double-click on Terminal)
2. Type **gcc** into the command line and hit **Enter**
3. Download the **pythonInstall.th** file from the Schedule Page.
4. Go to python.org and download Python source code "Gzipped source tarball" from https://www.python.org/downloads/release/python-345/
5. Unzip the download file and move **pythonInstall.th** into the folder created.
6. In your Terminal, go to the folder just created by **cd Downloads/Python-3.4.5**
7. Then type **chmod +x pythonInstall.th .** Then type **./pythonInstall.th.** Enter your computer's password whenever you are prompted to. The script should compile and install python on your computer.
8. To insure Python type **python3** into the Terminal. If it does not gives you an error and enter python's interactive console, you are good to go.
