Recurrence Relations Sorting overview

$$T(N) = \begin{cases} \theta(N^{\log_b a}) & \text{if } a > b^k \\ \theta(N^k \log N) & \text{if } a = b^k \\ \theta(N^k) & \text{if } a < b^k \end{cases}$$

After today, you should be able to...
...write recurrences for code snippets
...solve recurrences using telescoping and
the master method

More on Recurrence Relations

A technique for analyzing recursive algorithms

Recap: Recurrence Relation

- ▶ An equation (or inequality) that relates the n^{th} element of a sequence to certain of its predecessors (recursive case)
- ▶ Includes an initial condition (base case)
- ▶ **Solution:** A function of n .

Solve Simple Recurrence Relations

▶ One strategy: **guess and check**

▶ Examples:

- $T(0) = 0, T(N) = 2 + T(N-1)$
- $T(0) = 1, T(N) = 2 T(N-1)$
- $T(0) = T(1) = 1, T(N) = T(N-2) + T(N-1)$
- $T(0) = 1, T(N) = N T(N-1)$
- $T(0) = 0, T(N) = T(N-1) + N$
- $T(1) = 1, T(N) = 2 T(N/2) + N$
(just consider the cases where $N=2^k$)

Other solution strategies for recurrence relations

- ▶ Guess and check
- ▶ **Telescoping**
- ▶ The master theorem

Selection Sort

```
public static void selectionSort(int[] a) {  
    //Sorts a non-empty array of integers.  
  
    for (int last = a.length-1; last > 0; last--) {  
        // find largest, and exchange with last  
        int largest = a[0];  
        int largePosition = 0;  
  
        for (int j=1; j<=last; j++)  
            if (largest < a[j]) {  
                largest = a[j];  
                largePosition = j;  
            }  
        a[largePosition] = a[last];  
        a[last] = largest;  
    }  
}
```

What's N?

Selection Sort: recursive version

```
void sort(a) { sort(a, a.length-1); }
```

```
void sort(a, last) {  
    if (last == 0) return;  
    find max value in a from 0 to last  
    swap max to last  
    sort(a, last-1)  
}
```

What's N?

Another Strategy: Telescoping

- ▶ Basic idea: tweak the relation somehow so successive terms cancel
- ▶ Example: $T(1) = 1$, $T(N) = 2T(N/2) + N$
where $N = 2^k$ for some k
- ▶ Divide by N to get a “piece of the telescope”:

$$\begin{aligned}T(N) &= 2T\left(\frac{N}{2}\right) + N \\ \implies \frac{T(N)}{N} &= \frac{2T\left(\frac{N}{2}\right)}{N} + 1 \\ \implies \frac{T(N)}{N} &= \frac{T\left(\frac{N}{2}\right)}{\frac{N}{2}} + 1\end{aligned}$$

A Fourth Strategy: Master Theorem

- ▶ For Divide-and-conquer algorithms
 - Divide data into two or more parts **of the same size**
 - Solve problem on one or more of those parts
 - Combine "parts" solutions to solve whole problem
- ▶ Examples
 - Binary search
 - Merge Sort
 - MCSS recursive algorithm we studied last time

Theorem 7.5 in Weiss

Divide and Conquer Recurrences all have the same form

$$T(N) = aT(N/b) + \theta(N^k)$$

with $a \geq 1, b > 1$

- ▶ Recursive part
 - a = number of parts we solve
 - b = number of parts we divide into

- ▶ Non-recursive part
 - $f(N^k)$ = overhead of dividing and combining
(or, the amount of work done each recursion)

The Master Theorem is convenient, but only works for divide and conquer recurrences

- ▶ For any recurrence in the form:

$$T(N) = aT(N/b) + \theta(N^k)$$

$$\text{with } a \geq 1, b > 1$$

- ▶ The solution is

$$T(N) = \begin{cases} \theta(N^{\log_b a}) & \text{if } a > b^k \\ \theta(N^k \log N) & \text{if } a = b^k \\ \theta(N^k) & \text{if } a < b^k \end{cases}$$

Example: $2T(N/4) + N$

Summary: Recurrence Relations

- ▶ Analyze code to determine relation
 - Base case in code gives base case for relation
 - Number and “size” of recursive calls determine recursive part of recursive case
 - Non-recursive code determines rest of recursive case
- ▶ Apply one of four strategies
 - Guess and check
 - Substitution (a.k.a. iteration)
 - Telescoping
 - Master theorem

Sorting overview

Quick look at several sorting methods

Focus on quicksort

Quicksort average case analysis

Elementary Sorting Methods

- ▶ Name as many as you can
- ▶ How does each work?
- ▶ Running time for each (sorting N items)?
 - best
 - worst
 - average
 - extra space requirements
- ▶ Spend 10 minutes with a group of three, answering these questions. Then we will summarize

Put list on board
