

After today, you should be able to... ...use tree terminology ...write recursive tree functions

Download BinarySearchTree .zip archive from Moodle Day 6

Announcements

- Review Day 5's quizzes on Java Collections and Data Structures
- Preview of HW3: includes an essay

Observation about Stacks and Queues Infix \rightarrow Postfix problem

- It must be O(n), so you can't grow your strings
- character-by-character:
 - Strings are immutable, so characters must be copied.
 s += "*" is as slow growing an array using the +1 scheme
- Solution? Use a StringBuilder!
 - They have internal capacity, which doubles when full!
- See the example at the end of Warmup and Stretching's ShapeTest.java for an example.

Exam 1

- Exam 1 Thursday next week: 7–9 pm
 - Coverage:
 - Everything from reading and lectures, Sessions 1–7
 - Programs: Warmup, Stacks and Queues
 - Homeworks 1–2
 - Allowed resources:
 - Written part: 1/2 of one side of 8.5 x 11 paper
 - Goal: to let you use formulas but force you to summarize.
 - Programming part:
 - Textbook
 - Eclipse (including programs you have written for CSSE230)
 - CSSE230 web pages and materials on Moodle
 - Java API documentation bookmark these in your browser
 - Two previous 230 Exam 1's are available in Moodle

Exam 1 Possible Topics

- Written (50–70%):
 - Growable Arrays
 - MCSS
 - big $O/\theta/\Omega$: true/false, using definitions, code analysis
 - Binary search
 - ADT/Collections
 - Choosing an ADT to solve a given problem
- Programming (30–50%):
 - Implementing an ADT using an array, nodes, or another ADT
 - Writing an efficient algorithm to solve a simple array-based problem

Questions?

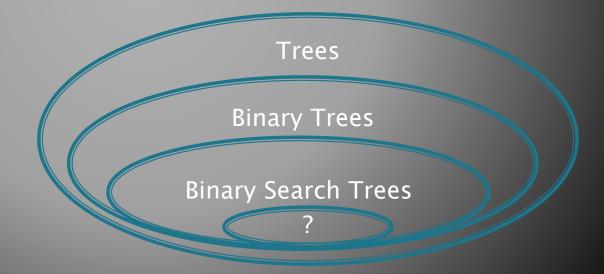

Next:

 an implementation that offers interesting benefits, but is more complex to code than arrays or lists...

• ... Trees!

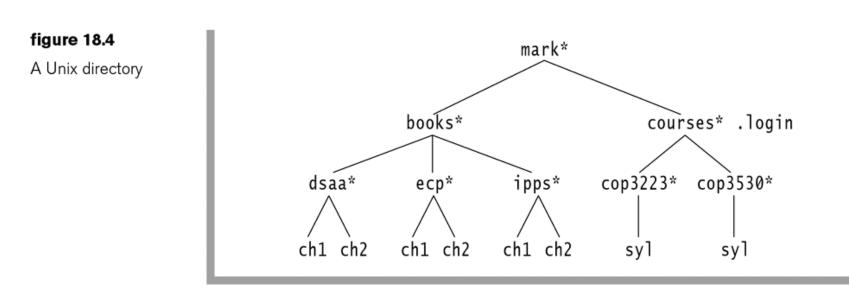

Trees

Introduction and terminology for three types

Trees in everyday life

Class hierarchy tree (single inheritance only)
Directory tree in a file system

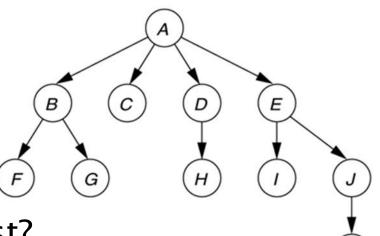

Traverse a Directory Tree

```
import java.io.File;
public class TraverseFiles {
   public static void main(String... args) {
       File[] files =
          new File("C:/EclipseWorkspaces/csse230-2014/BST2").listFiles();
       showFiles(files, 0);
    }
   public static void showFiles(File[] files, int indent) {
       for (File file : files) {
            if (file.isDirectory()) {
                                          ".substring(0,indent) +
               System.out.println("
                                  "Directory: " + file.getName());
               showFiles(file.listFiles(), indent+1); // Calls method again.
            } else {
               System.out.println(" ".substring(0,indent) +
                                  "File: " + file.getName());
            }
```

A General Tree—Global View

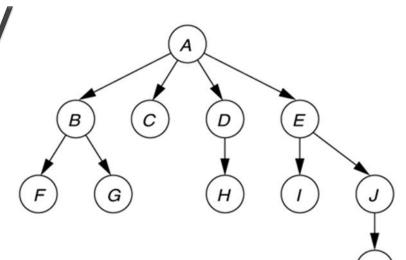

- A collection of nodes
- Nodes are connected by directed edges.
 - One special root node has no incoming edges
 - All other nodes have exactly one incoming edge
- One way that Computer Scientists are odd is that our trees usually have their root at the top!

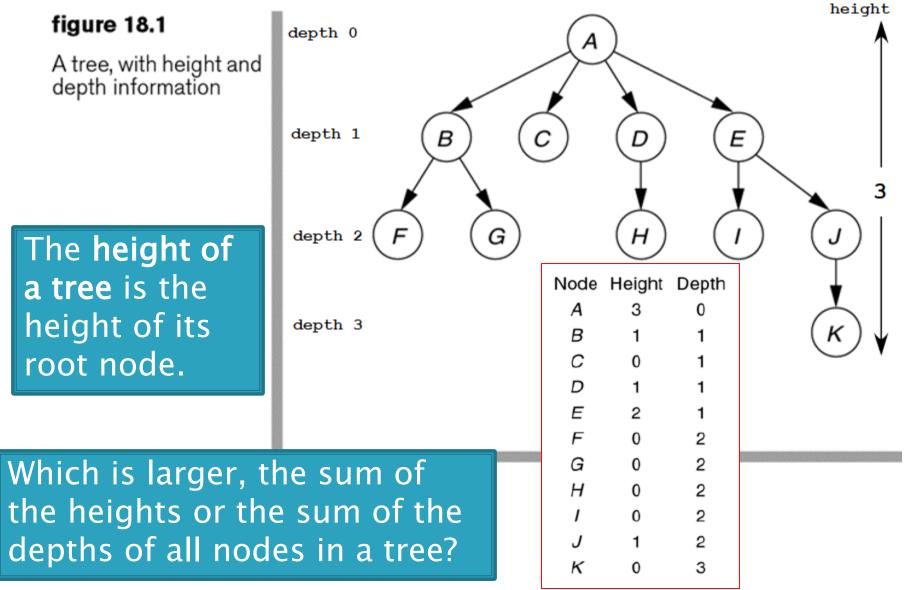

- How are trees like a linked list?
- How are they different?

Tree Terminology

- Parent
- Child
- Grandparent
- Sibling
- Ancestors and descendants
- Proper ancestors, proper descendants
- Subtree
- Leaf, interior node
- Depth and height of a node
- Height of a tree

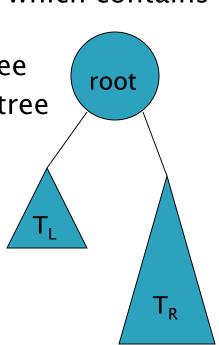

Node height and depth examples

Binary Tree: Recursive definition

- A Binary Tree is either
 - **empty**, or
 - consists of:
 - a distinguished node called the root, which contains an element, and
 - A left subtree T_L, which is a binary tree
 - A right subtree T_R, which is a binary tree
- Binary trees contain at most 2 children

Q8-10

Binary Search Tree (BST)

- A binary tree with the Search Property:
 - Every element in the left subtree is smaller than the root, and every element in the right subtree is larger than the root. And this is true at every node, not just the root.
- Compare: search on
 - Binary tree?
 - Binary Search Tree?

Q11

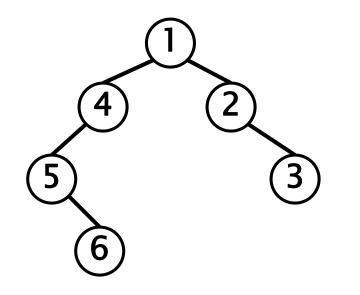

Recursion in Binary Trees

- (Review) Write size() for linked list
 - Non-recursively
 - Recursively
- Write size() for a tree
 - Recursively
 - Non-recursively (later)
- What are characteristics of correct, efficient recursive code?

Growing Trees

Let's start the BinarySearchTrees assignment: implement a BinaryTree<T> class

Test tree:

A single tiny recursive method for size will touch every node in the tree. Let's write, then watch in debugger.
