

Today's Agenda

- Announcements
 - EditorTrees team preferences survey due tonight
 - Also HW 4
 - Also Doublets partner evaluation survey
 - Exam 2 (programming only) in class on Tuesday (day 14).

You'll have at least 85 minutes for the exam

- Another induction example
- Recap: The need for balanced trees
- Analysis of worst case for height-balanced (AVL) trees

03

A useful result... by way of induction

- Recall our definition of the Fibonacci numbers:
 - $F_0 = 0$, $F_1 = 1$, $F_n = F_{n-1} + F_{n-2}$

• Prove the closed form:

7.8 Prove by induction the formula

$$F_N = \frac{1}{\sqrt{5}} \left(\left(\frac{(1+\sqrt{5})}{2} \right)^N - \left(\frac{1-\sqrt{5}}{2} \right)^N \right)$$

Recall: How to show that property P(n) is true for all $n \ge n_0$:

(1) Show the base case(s) directly

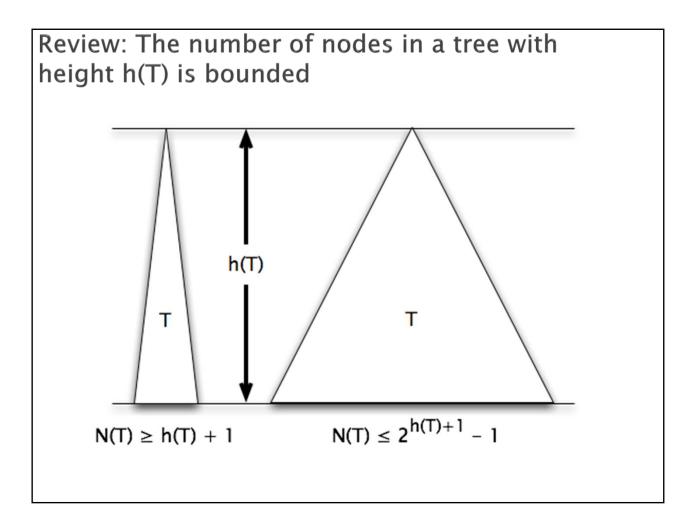

(2) Show that if P(j) is true for all j with $n_0 \le j < k$, then P(k) is true also

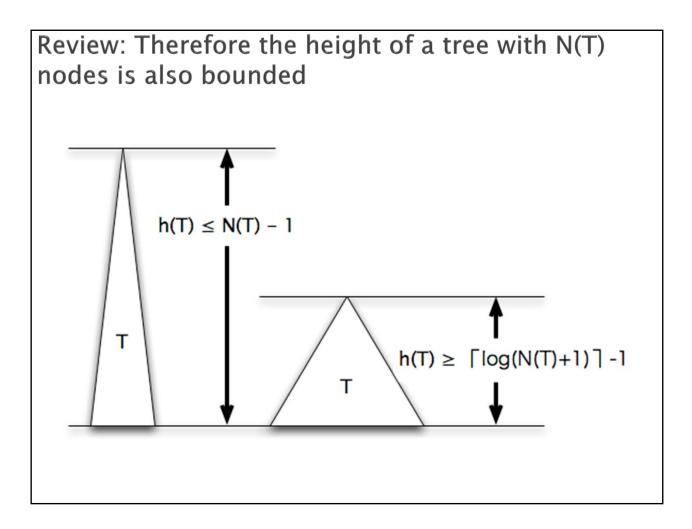

Details of step 2:

a. Fix "arbitrary but specific" $k \ge$ _____.

- b. Write the induction hypothesis: assume P(j) is true $\forall j : n_0 \le j < k$
- c. Prove P(k), using the induction hypothesis.

	Α	В	С	D	E	
1		1/SQRT(5) =	0.447213595			
2		(1 + SQRT(5))/2 =	1.618033989			
3		(1 - SQRT(5))/2 =	-0.618033989			
4						
5			Fibonacci		Fibonacci	
6			Open Form		Closed Form	
7	n	f _n =	f _{n-1} + f _{n -2}		C\$1*(POWER(C\$2,n) - POWER(C\$3,	n))
8						
9	0	f0 =	0			0
10	1	f1 =	1			1
11	2	f2 =	1			1

27	18	f18 =	2584		25	584
28	19	f19 =	4181		41	181
29	20	f20 =	6765		67	765

We want to keep trees balanced so that the run Q4 time of BST algorithms is minimized

- BST algorithms are O(h(T))
- Minimum value of h(T) is $\left[\log(N(T) + 1)\right] 1$
- Can we rearrange the tree after an insertion to guarantee that h(T) is always minimized?
